1 Uploading data from OECD and Statcan and Integrating Them

1.1 File *GDP_comp.py*

In *GDP_comp.py* I upload OECD data and Statcan data and integrate them by

1. Converting Statcan from CAD to USD
2. Mapping the Statcan sectors (more detailed) to OECD sectors

GDP_comp.py is the same as *func_upload_data.py* where I upload OECD and statcan data into *income_multipliers*.

1.2 Plotting T as function of year

plot_T_vs_time.py plots T of the 6 ICT sectors as function of year. Sector G (wholesaling) has variability in T .

1.3 Uploading all data from statcan - not just GDP

In *read_statcan.py* I upload all data from statcan - not just GDP. I need the “compensation of employees” for the closed model. I updated *func_data_upload.py* to *func_data_upload2.py* to include all data of statcan.

Figure 1: Value Added by Sector (StatCan, 2016)

1.4 Output prediction

In *output_multipliers_all_sectors.py* I plot the predicted output versus the real output. The simple model gives very exact results.

1.5 Summary of files

upload_data.py - this is uploading only GDP from statcan, and not a function.
The early version of *func_upload_data2.py*
